

Fastball Mathball Instructions

What you will need:

- A playing piece for each team
- Baseballs with math questions
- 1-2 6 sided dice

How to play:

The purpose of the game is to get the most points (homeruns) at the end of a set number of innings. (Decide how many innings there will be before you begin)

Decide what team will be hitting first. The team that is not hitting will be pitching (rolling the dice). Once the dice are rolled the hitting team will then pick up a baseball and use the number on the dice to fill in the blank space on the ball and solve the math problem that they pick up. If the hitter gets the correct answer they will get to move the amount of bases indicated (1, 2, 3, or homerun which is 4 bases) if they get it incorrect that will count as a strike. When the team gets 3 strikes the teams will then switch.

Once both teams have gotten 3 strikes that will count as an inning. When the decided number of innings is complete the team with the most amount of “runs” wins the game. If there is a tie, they will go into extra innings.
